

Lung cancer causes more deaths than any other cancer. The good news is that early detection through lung cancer CT screening can significantly improve your likelihood of survival.

- 85% of high-risk patients can be cured once a CT screening detects lung cancer
- 92% cure rate with early detection and appropriate treatment
- Without early screening, over 95% of lung cancer patients die within a few years of diagnosis

LUNG CANCER SCREENING

DRH Imaging offers a low dose Lung Cancer CT, the technology of choice for lung cancer screening studies. You should get screened if you:

- Are age 50 to 74 (will accept age 40-55 old if infertile.)
- Current smoker with a 30 pack/year history (minimum of 1 pack/day for 30 years or 2 packs/day for 15 years.)

OR Former smoker with a 30 pack/year history (minimum of 1 pack/day for 30 years, etc.)

DRH Imaging offers CT Lung Screening for FREE if you meet this criteria.

ANY OF FOLLOWING WILL EXCLUDE PATIENT FROM ENTERING THIS FREE PROGRAM:

- Metallic implants in chest (pacemaker, cardioverter/defibrillator, pain management systems) (stents, artificial valves, sternal wires are OK.)
- Treatment for OR evidence of ANY cancer in the past 5 years.
- History of Lung Cancer.
- Prior lung resection surgery.
- Currently on oxygen therapy.
- Been treated for a respiratory infection within past 12 weeks (i.e. pneumonia, bronchitis, etc.)
- Unable to lie on back with arms above head.
- Had a CT of the Thorax in the last 12 months.
- Already had a FREE smoker's screen from DRH Imaging (one free scan per patient.)
- Patient must reside within certain zip codes (living outside of EXCLUDES patient from program OR approved at the discretion of the Director of Imaging Services) Call to verify your zip is included.
